          Sequence 2, Application US/09008172
Patent No. 6127602
GENERAL INFORMATION:
APPLICANT: Nichols, Scott E.
TITLE OF INVENTION: Substitutes for Modified Starch and
TITLE OF INVENTION: Latexes in Paper Manufacture
FILE REFERENCE: 0358D
CURRENT APPLICATION NUMBER: US/09/008,172
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequence 4, Application US/09604957

Also included are a glucan produced by the GTF mutant, CC 145TT/M59BE. Also included are a glucan produced by the GTF mutant, CC 145TT/M59BE. Also included are a glucan produced by the GTF mutant, CC 145TT/M59BE. Also included are a glucan produced by the GTF mutant, CC 145TT/M59BE. Also included are a glucan produced by the GTF mutant, CC 145TT/M59BE. Also included are a glucan produced by the GTF mutant, CC 145TT/M59BE. Also included are a glucan produced by the GTF mutant, CC 145TT/M59BE. Also included are a glucan produced by the GTF mutant, CC 145TT/M59BE. Also included a glucan produced in a plant transformed composition comprising the mutant GTF, wild type or, starch, a latex, the glucan is produced in the amyloplast and/or vacuole or a maize line cc deficient in starch biosynthesis, transformed with a gene encoding a glucan produced with a gene encoding a glucan produced with a gene encoding a composition of paper sizing/coating agent). The vector is useful cfor producing a glucan produce the glucan in the comprises transforming a glucan produced by GTF, which transforming a glucan produced in the amyloplast of potato or the vacuole of sugar beet. CC clucans are useful as substitutes for and additions to modified starch composition are useful as substitutes for and additions to modified starch composition and latexes in paper manufacture. Unlike prior art techniques, which cc and latexes in paper manufacture will be produced by GTF, which utilises discount of the paper discount of the p

Glucosyltransferase B or D protein useful for producing a glucan uses substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions -

Claim 36; Page -; 44pp; English.

conanges at positions from 1889, 1889%, NA/LD, NA/LD, 1889, and considered polynucleotide which encodes P1 or P2, or its complementary polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, an expression cassette comprising the polynucleotide operably linked to a promoter, a vector comprising the polynucleotide operably linked to a conting composition comprising the syression cassette, host cell coating composition comprising a glucan produced in a plant transformed coating composition comprising a glucan produced in a plant transformed coating composition comprising a glucan produced in a plant transformed coating composition the mutant GTF, wild type or, starch, a latex, the glucan is produced in the amyloplast and/or vacuole or a maize line comprising the glucan is produced in the amyloplast and/or vacuole or a maize line comprising the glucan in a plant. The western a latex, the glucan is trarch biosynthesis, transformed with a gene encoding a glucosyltransferase B or Denzyme, wild-type or mutant and a paper comprising the glucan in a plant. The method comprises transforming a glucan in a plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the regenerated plant and inducing expression of the colorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Comprises in paper manufacture. Unlike prior art techniques, which require input materials that produce db gffy, which utilises biologically produced input materials, is more cost-effective and convironmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step.

The present sequence represents a GTFD mutant of the invention. But was created by the indexer using the GTFD sequence appearing as AAU98029 and the information in claim 36.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a comprising the glucan (paper sizing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a comprising the glucan in a plant. The method comprises transforming a conditions to produce a regenerated plant and inducing expression of the plant cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the regenerated plant, where the vector contains a transit sequence from cribulose biphosphate carboxylase small subunit, waxy, brittle-1 and conformed in the amyloplast of potato or the vacuole of sugar beet. Clucans are useful as substitutes for and additions to modified starch is produced in the amyloplast of potato or the vacuole of sugar beet. Clucans are useful as substitutes for and additions to modified starch can distression that produce chemical effluents, paper considered input materials that produced by GTF, which utilises biologically produced input materials, is more cost-effective and convict or the present sequence is not shown in the specification but was created by the indexer using the GTFD sequence appearing as AAU98029 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Best Loc

Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions -

laim 36; Page -; 44pp; English

The invention an isolated protein comprising a glucosyltransferase (CGTF) B polypeptide having changes at position from 1448V, D457N, D567T, D571K/K1014T, T448V/D457N/D571K, D567T/D571K, CC 1567A/K170A/X171A, and K779Q or a GTF D polypeptide having changes at positions from T599D, T599B, M471D/T599D, and K797Q or a GTF D polypeptide having CC Anisolated polynucleotide which encodes P1 or P2, or its complementary CC an isolated polynucleotide which encodes P1 or P2, or its complementary CC polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, and expression cassette, host cell introduced with the vector, a transgenic plant comprising the polynucleotide operably linked to a CC promoter, a vector comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the CC vector, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, thermoplastic molecule or their combinations or glucan and starch where the plucan is produced in the amyloplast and/or vacuole or a maize line CC deficient in starch biosynthesis, transformed with a gene encoding a GLUCAN paper sizing/coating agent). The vector is useful comprising the glucan in a plant. The method comprises transforming a CC plant cell with the vector, growing the plant cell under plant growing to polynucleotide for a time sufficient to produce a transformed CC ribucomyllas binding protein to produce a transit sequence from the spouchest and inducing expression of the polynucleotide for a time sufficient to produce a transit sequence from the spouchest and paper manufacture. Unlike pilor art techniques, which the spouche of the polynucleotide for a time sufficient to produce a transit sequence from the spouchest are sufficient to produce a transit sequence from the spouchest plant and glucan in the spouchest plant and glucan in the spouchest plant and glucan in the sp

  The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from 1448V, D457N, D567T, K1014T, D457N/D567T, D457N/D57TK, D567T/D57TK, D567T/D57TK/K1014T, 1448V/D457N/D567T/D57TK/K779D57TK, D567T/D57TK/K1014T, 1448V/D457N/D567T/D57TK/K779D67TA, and K779Q or a GTF D polypeptide having changes at positions from T589D, T589E, N471D, N471D/T589D, and N471D/T589E. Also included are a glucan produced by the GTF mutant, an isolated polymucleotide which encodes P1 or P2, or its complemen polymucleotide, a ribonucleic acid sequence encoding the GTF mutant
                                                                                                                                                                                                                                                                                        Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions
                                                                                                                                                                                                                                                      Claim 36;
                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2002-414332/44
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nichols

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC Streptococcus salivarius. The enzyme is primer-independent, and CC produces soluble glucan from sucrose. A gene encoding the enzyme CC may be cloned and expressed in Escherichia coli using a subclone CC phage lambda-Cl3, e.g. plasmid pGSG501 or plasmid pGSG502. The CC DNA may also be expressed in a transgenic plant, to improve the CC contains low levels, or to prevent degradation of stored carbohydrate CC contains low levels, or to prevent degradation of stored carbohydrate CC during plant senescence. Dextran may be isolated from the plant, for use as a food binder or pharmaceutical additive. Primer independence CC ensures that the enzyme will be functional in plants. The glucan is poorly degraded in plants but easily degraded by bacteria in the rumen CC x
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

The dextran saccharase is useful in prebiotic, pharmaceutical or cosmetic compositions. The dextrans and related compounds having alpha(1-2) bonds, produced using DSR-E, may be involved in signalling/cellular recognition processes in vivo (specifically in regulation of microflora in the intestines or on the skin); and are potentially useful for improving intestinal transit, increasing assimilation of minerals (e.g. calcium and/or magnesium), preventing cancer of the colon and combating skin problems such as acne, and the colon and combating skin problems such as acne,

                                                                                                                                                                                                                                                                                                                                                  method is used to produce yoghurt, curd, cheese or other fermented milk products, ice cream, fermented cereal products, water-based jellies, infant formulae and pet foods. Dextransucrase can also be bound to e.g. vitamins or oral vaccines for delivering these to foods, using (A) as carrier. The method produces foods with attractive and uniform texture, since dextransucrase is evenly distributed and forms a thickening agent in situ, with the amount formed being controlled by the amount of dextransucrase bound. Milk does not have to be coagulated in order to achieve a good texture, so the amount of acidic by-products formed is reduced. Dextransucrase binds to many different types of cells over wide ranges of temperature and pH and the treated bacteria can be stored in liquid or powdered form. The present sequence represents the amino acid

CC (GTF) B polypetide having changes at position from 1480v, D457N, CC D567T, K1014T, D457N/D57TK, D567T/D57TK, D57TK/K1014T, I448V/D457N/D57TK, D567T/D57TK, D57TK/K1014T, I448V/D457N/D567T/D57TK/K7790/K1014T, CC Changes at positions from TS9D, T58DE, N47LD, M47LD/T58DE, And K779Q or a GTF D polypeptide having CC changes at positions from TS9D, T58DE, N47LD, M47LD/T58DE, Also included are a glucan produced by the GTF mutant, CC an isolated polynuclectide which encodes P1 or P2, or its complementary polynuclectide, a ribonucleic acid sequence encoding the GTF mutant, CC an isolated polynuclectide operably linked to a promoter, a vector comprising the polynuclectide operably linked to a promoter, a vector comprising the produced in plant comprising the vector, a transgenic plant comprising and/or coating composition comprising a glucan produced in a plant transformed comprising the mutant GTF, wild type or, starch, a latex, complicating composition comprising a glucan produced in a plant transformed comprising the sproduced in the amyloplast and/or vacuole or a maize line cell glucan in starch biosynthesis, transformed with a gene encoding a glucan producing a glucan in a plant transforming a glucan pagurant of producing a glucan in a plant. The method comprises transforming a glucosyltransferase B or D enzyme, wild-type or mutant and a paper comprising the glucan in a plant. The method comprises transforming a glucosyltransferase B or D enzyme, wild-type or mutant and a paper comprising the producing a plant of the vector, growing the plant gene plant growing conditions to produce a regenerated plant and inducing expression of the comprises by produce a regenerated plant and inducing expression of the comprises by produce and plant to produce the glucan in the criminal subunit, waxy, brittle-1 and comprised starch by produce and substitutes for and additions to modified starch
                                    Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       07-JUN-1995;

Also included are a glucan produced by the GTF mutant, CC an isolated polynucleotide which encodes P1 or P2, or its complementary CC polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, CC an expression cassette comprising the polynucleotide operably linked to a promoter, a vector comprising the expression cassette, host cell continuously the vector, a transgenic plant comprising the vector coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, the implication composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a glucan (paper sizing/coating agent). The vector is useful comprising the glucan (paper sizing/coating agent). The vector is useful comprising the plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the regenerated plant and inducing expression of the regenerated plant, where the vector contains a transit sequence from cribulose biphosphate carboxylase small subunit, waxy, brittle-1 and chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beer. CC clucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce dhemical efficients, paper cc biologically produced input materials, is more cost-effective and cologically growled input materials, is more cost-effective and conjugated input materials that the cost-effective and conjugated input materials that the cost-effective and conjugated input materials.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTPB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTPB sequence appearing as AAU980.

                      The invention an isolated protein comprising a glucosyltransferase (GTP) B polypeptide having changes at position from 148V, D457N, CC D5677, K1014T, D457N/D57K, CC D5677D571K, K1014T, D457N/D57T, D457N/D57TK, D5677D57TK, CC Y163A/Y10A/Y11A, and K779Q or a GTF D91ypeptide having changes at positions from T589D, T589E, N47D, N47D/T589D, and M47D/T589E. Also included are a glucan produced by the GTF mutant, an introduced with encodes P1 or P2, or its complementary CC polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, an expression cassette comprising the polynucleotide operably linked to a promoter, a vector comprising the polynucleotide operably linked to a compression of the vector, a transgenic plant, a paper sizing and/or counting composition comprising the polynucleotide operably linked to a rypression cassette comprising the comprising the comprising the vector, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or starch, a latex, thermoplastic molecule or their combinations or glucan and starch where the plucan from the amyloplast and/or vacuole or a maize like comprising the glucan in a plant. The method comprises transformed where the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan in the plucan produced in the amyloplast of potato or the vacuole of sugar beet.

CC comprising the glucan in a plant or produce the glucan in the produced in the amyloplast of potato or the vacuole of sugar beet.

CC and latexes in paper manufacture. Unite produced by GTF, which utilises to industrie the place during ocating steps which the morphism of the place during coat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC comprising the glucan (paper sizing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a cc plant cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the cregenerated plant, where the vector contains a transit sequence from cc ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and cc chlorophyll AB binding protein to produce a transgenic plant, and glucan cl is produced in the amyloplast of potato or the vacuole of sugar beet. cc glucans are useful as substitutes for and additions to modified starch card and latexes in paper manufacture. Unlike prior art techniques, which cc require input materials that produce chemical effluents, paper cc biologically produced input materials, is more cost-effective and cenvironmentally friendly. Moreover, glucans also exhibit thempolastic properties and impart gloss to the paper during coating step. The present sequence is not shown in the specification but cc was created by the indexer using the GTFB sequence appearing as AAU98327 created and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

Sequence properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36. require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic environmentally friendly. 1475 AA;

CC 15671/T08/Y171A, and K7790 or a GTF D polypeptide having
CC changes at positions from TS89D, T889E, W917D, W71D/T889D, and
CM971D/T589E. Also included are a glucan produced by the GTF mutant,
CC an isolated polynuclectide which encodes P1 or P2, or its complementary
CC an expression cassette comprising the polynucleotide operably linked to a
CC promoter; a vector comprising the polynucleotide operably linked to a
CC promoter; a vector comprising a dyucan produced in a plant transformed
CC vector, a seed or tuber from the transgenic plant, a paper sizing and/or
CC coating composition comprising a dyucan produced in a plant transformed
CC with a gene encoding the mutant GTF, wild type or, starch, a latex,
CC thermoplastic molecule or their combinations or glucan and starch where
CC the glucan is produced in the amyloplast and/or vacuole or a maize line
CC deficient in starch biosynthesis, transformed with a gene encoding a
CC comprising the glucan in a plant. The method comprises transforming a
CC comprising the glucan in a plant. The method comprises transforming a
CC plant cell with the vector, growing the plant cell under plant growing
CC conditions to produce a regenerated plant and inducing expression of the
CC riborlose biphosphate carboxylase small submit, waxy, brittle-1 and
CC is produced in the amyloplast of potato or the vacuole of sugar beet.
CC colonia are useful as substitutes for and additions to modified stranch
CC and latexes in paper manufacture. Unlike prior art techniques, which
CC and latexes in paper manufacture. Unlike prior art techniques, which
CC and latexes in paper manufacture. Unlike prior art techniques, which
CC concentrally friendly. Moreover, glucans also exhibit thermoplastic
CC properties and impart gloss to the paper during coating step.

CC manufacture utilising the glucan produced by GTF, which utilises
CC properties and impart gloss to the paper during coating step.

CC was created by the indexer using the GTFB sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from I448V, D457N, D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in

O
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                              Score
